NEW YORK CITY: ACCESSIBILITY TO PUBLIC SCHOOLS FROM AFFORDABLE HOUSING

Jessie Fujii | CRP 3850 | June 23rd, 2024

INTRODUCTION

Research Question: Is affordable housing in NYC located in areas accessible to schools?

Methodology:

- NYC Open Data
- Affordable housing production by building from the 2014-2021 Housing New York plan and the 2022-present Housing Our Neighbors: A Blueprint for Housing & Homelessness plan
- 2019 school location data
- Spatial analysis was done on affordable rental units, as a majority of affordable housing is shown to be in the rental market

CONCLUSION

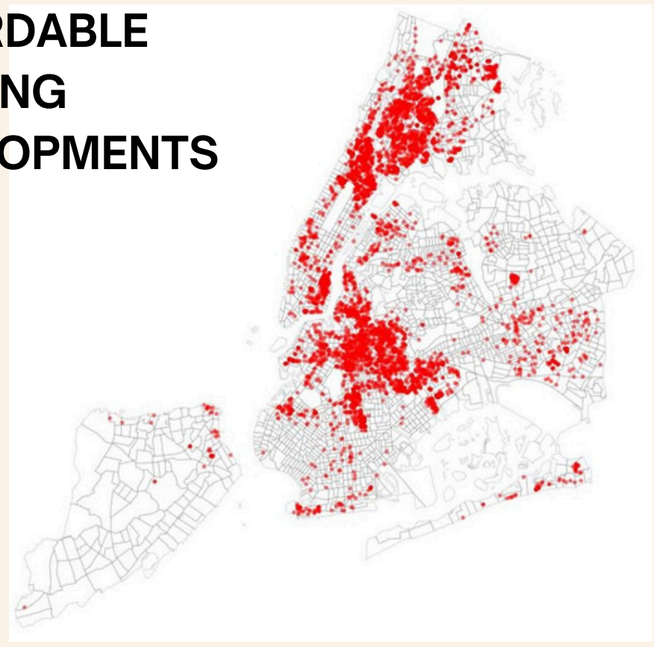

Limitations:

There are many other factors that influence the location of affordable housing that need to be explored. Additionally, there is a lot of variation in when each dataset was collected.

Results:

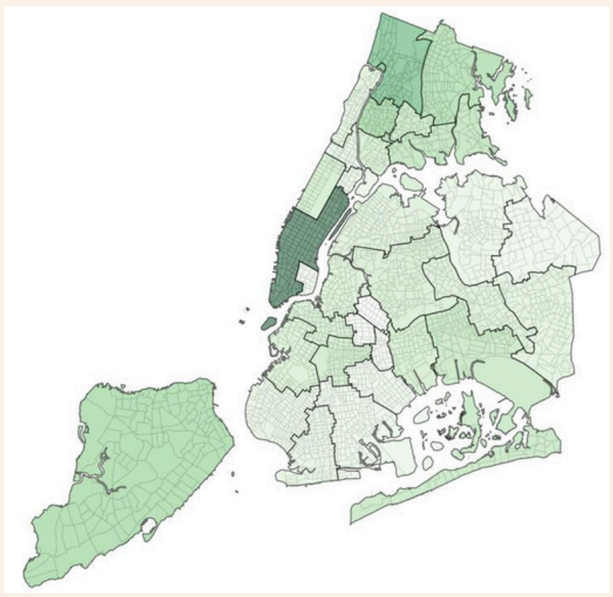

Affordable housing location seems to not be related to locations to public schools, as the Moran's I analysis depicts clusters of affordable rental units to not have significant overlap with clusters of public schools. There appears to be a concentration of public schools in Manhattan, but it is important to note the role of population density variations among school districts, in addition to the specialized high school system in Manhattan.
